

BUILDING TECHNOLOGY

Here's Your February 2023 Instrumentation News

Case Study: TQL Stadium

Carbon Monoxide (CO) and Nitrogen Dioxide (NO₂) are life-threatening health risks. And within enclosed structures, such as a parking garage, the threat is multiplied exponentially. And so, when FC Cincinnati's state-of-the-art soccer stadium was constructed, the building engineer naturally turned to AEB and Critical Environmental Technologies.

From the Archives: Grounding Electromagnetic Flow Meters

The proper installation and grounding of Electromagnetic Flow Meters is critical from both a performance and safety perspective. If not correctly grounded, noise signals resulting from stray currents created from high voltage equipment, VFD's, and other motors may resonate through the fluid and into the

instrumentation. This disturbance can interfere with signals generated by the flow meter compromising reading accuracy.

4 Questions 4: Scott Cyron

As AEB's newest team member, Scott serves current and future northeastern Ohio customers. His daily activities include sales, consulting with contractors and engineers, researching and quoting projects, reading blueprints, completing take-offs, and customer relations. Let's learn a little more about Scott with four quick questions.
